How To Configure GRuNT

First of all send all love to Jason @ Denial Designs [<http://denial-designs.com>]. I'll take the hate as I'm the one that ported his template. Basically install the 'GRuNT' Folder into your '.../wp-content/themes/' folder and activate it. Everything should work. If you'd like to use the included plugins then, (1) read any of the authors instructions if included (2) drop them into your '...wp-content/plugins/' folder and (3) activate them. I've wrapped all the plugins (I hope) in 'if exists' calls so if you choose not to install the plugins they simply won't show up.

If you browse the GRuNT files you'll see places I've commented out code or suggestions. Delete the '<!--' '-->' between the code if you'd like to use that stuff.

Here's some other configuration suggestions:

Recent Comments Plugin: To display the gravatars like on the demo site head to the Options/Recent Comments panel and use this code: `<li class="comments">a href="%comment_link title="%post_title,%posts_date">%gravatar %post_title`

Author Highlighting: For author comment highlighting go to line 34 & 35 of the comments.php and enter your information there.

License

GRuNT is released under GPL. Please leave the footer link to Denial Designs. While I'd appreciate some link love myself do what you will with my link in the footer.
